

Functional & Performance Testing Template

Model Performance Test

Date	28 September 2026
Team ID	SWTID-2026-2362
Project Name	Streamlining IT procurement automating standard laptop with flow designer
Maximum Marks	4 Marks

Test Scenarios & Results

Test Case ID	Scenario (What to test)	Test Steps (How to test)	Expected Result	Actual Result	Pass/Fail
FT-01	Catalog Item Form Text Validation (Employee Name, Department, Job Title)	Enter valid alpha characters and invalid special characters strings into portal fields.	Valid inputs successfully accepted; errors block invalid formatting submission.	System blocked submission on corrupt string input and accepted regular data strings.	Pass
FT-02	Hardware Quantity Numeric Field Validation	Enter quantities within range (1-5) and out of bounds values (-1, 50, text keys).	Accepts reasonable values; shows validation error for values out-of-range.	Successfully threw alert constraints when quantity set to 0 or exceeding maximum batch threshold.	Pass
FT-03	Automated Service Ticket & PO Task Generation	Provide complete standard specifications inputs and click 'Order Now' button.	Service request item created, manager workflow triggered, and task logged.	Workflow accurately processed configurations and initiated approval stage immediately.	Pass
FT-04	Integration Hub Outbound REST API Spoke Connection Check	Trigger transaction calls via Spoke credentials to external warehouse vendor inventory API.	Remote gateway responds with successful authentication token and 200 OK code status.	API handshakes executed securely with correct JSON payload response received.	Pass
PT-01	System Flow Engine Response Time Performance	Use execution timeline log profiles to check internal catalog submission response speed.	End-to-end user request lifecycle execution should finalize under 3 seconds time limit.	Average form generation time tracked at 1.84 seconds under sandbox validation test.	Pass
PT-02	Concurrent API Transaction Speed Load Test	Send multiple concurrent outbound vendor procurement API calls synchronously.	Integration Hub processing stays stable without throttle errors or thread slowdowns.	Maintained consistent latency under 2.1 seconds for 50 concurrent data transfers.	Pass

Test Case ID	Scenario (What to test)	Test Steps (How to test)	Expected Result	Actual Result	Pass/Fail
PT-03	Bulk HR Onboarding Roster File Upload Stress Test	Upload heavy Excel/CSV employee rosters to trigger automated batch profiles extraction.	System processes records smoothly and pipelines laptop tickets without runtime crashes.	Processed batch payload of 200 concurrent system requests with zero queue exceptions.	Pass
