

Problem-Solution Fit Canvas 2.0

Topic: Streamlining IT Procurement Automating Standard Laptop with Flow Designer

1. CUSTOMER SEGMENT(S)

- **Internal IT Operations Teams:** Service desk agents and sysadmins who manually process hardware requests.
- **IT Procurement Managers:** Responsible for hardware budget, vendor coordination, and asset tracking.
- **End-Users / Employees:** New hires or existing staff who need a standard laptop quickly.

6. CUSTOMER CONSTRAINTS

- **Compliance & Security:** Strict corporate governance requiring recorded manager and budget approvals before hardware is issued.
- **Budget/Licensing:** Restricted ServiceNow integration hub licensing tiers for external vendor APIs.
- **Change Resistance:** Stakeholders who prefer traditional manual signatures or informal email approvals.

5. AVAILABLE SOLUTIONS

- **Manual Email & Spreadsheets:** Pros: No setup cost. Cons: High error rate, easily lost, zero tracking automation.
- **Basic Ticketing:** Pros: Centralizes the request. Cons: IT staff still have to manually click through approvals, email vendors, and update databases.

2. JOBS-TO-BE-DONE / PROBLEMS

- **Provisioning Hardware:** Ordering, configuring, and delivering standard laptops for onboarding or hardware refreshes.
- **Procurement Bottlenecks:** Dealing with slow manual approvals, delayed vendor orders, and high human error rates.
- **Lack of Visibility:** Handing off requests into a 'black hole' with no order status transparency.

9. PROBLEM ROOT CAUSE

- **Disconnected Systems:** The HR platform, IT asset management database, and vendor ordering systems do not communicate natively.
- **Manual Bottlenecks:** Lack of an end-to-end automated orchestrator to handle complex logic branches or API integrations.

7. BEHAVIOUR

- **IT Personnel:** Spend hours chasing managers for approval signatures via chat, checking physical stock rooms, and typing details into vendor sites.
- **Requesters:** Send frequent follow-up emails or chats ('Any updates on my laptop?') due to lack of visibility.

3. TRIGGERS

- **HR Onboarding Event:** A new hire profile is created in the HR system (e.g., Workday), requiring a laptop setup on Day 1.
- **Hardware Refresh Cycle:** An employee's current laptop hits its 3-year end-of-life cycle.
- **Ticket Spikes:** IT support queues getting overwhelmed by repetitive hardware requests.

4. EMOTIONS: BEFORE / AFTER

- **Before:** Frustrated by long wait times, anxious about new hires not having tools on Day 1, and overwhelmed by paperwork.
- **After:** Relieved by instant processing, confident in data accuracy, and satisfied with complete tracking visibility.

10. YOUR SOLUTION

- **Flow Designer Automation:** An end-to-end automated workflow built in ServiceNow Flow Designer. It automatically checks inventory, sends instant approval notifications via Teams/Email, auto-generates vendor POs via API if stock is low, and updates the Asset Management database seamlessly.

8. CHANNELS OF BEHAVIOUR

- **8.1 Online:** ServiceNow Service Portal, email threads, Microsoft Teams/Slack notifications, vendor portals.
- **8.2 Offline:** Physical inventory tracking in IT stockrooms, face-to-face manager check-ins for manual approval sign-offs.
