Project Name	Streamlining IT Procurement: Automating Laptop Orders via Flow Designer
Maximum Marks	5 Marks

Project Overview

Project Name: Streamlining IT Procurement: Automating Standard Laptop Orders with Flow Designer

Project Description: An enterprise-grade ServiceNow solution engineered to replace friction-heavy, legacy manual hardware procurement pipelines with an automated fulfillment framework built on Flow Designer. The solution dynamically parses employee profiles for role-based hardware deployment, runs synchronous CMDB inventory stock allocations, triggers interactive supervisor approvals via multi-channel integrations, and orchestrates zero-touch application provisioning profiles on target endpoints via IntegrationHub handlers.

Project Version: v2.4.0-RC2

Testing Period: 21 September 2026 to 28 September 2026

Testing Scope

Features and Functionalities to be Tested:

1. Service Catalog Intake & dynamic validation logic routing rules.
2. Synchronous hardware database lookup queries on active asset structures (`alm\_hardware`).
3. High-priority dynamic approval node processing loops with active SLA countdown timers.
4. IntegrationHub external REST API webhook processing for shipping carrier delivery confirmations.
5. Automated zero-touch cloud configuration initialization triggers (Windows Autopilot engine profiles).

User Stories or Requirements to be Tested:

- *USN-01 & USN-02:* Form auto-population parameters mapping user cost center metrics cleanly.
- *USN-03 & USN-04:* Stock threshold evaluations executing fallback routes if inventories dip.
- *USN-07 & USN-09:* Multi-branch webhook logic verifying delivery state modifications instantly from 'Available' to 'In Use'.

Testing Environment

URL/Location: ServiceNow Enterprise Sub-Instance (<https://dev104822.service-now.com/esc>)

Credentials (UAT Accounts):

- *Requester Profile:* uat.employee / SecureAuth2026!
- *Approver Profile:* uat.manager / LineMgrApprove9#
- *Fulfillment Admin:* uat.itdesk / StockControlWarehouse!

Test Cases Execution Matrix

ID	Test Scenario	Execution Steps	Expected Result	Actual Result	Status
TC-001	Catalog Item Persona Auto-population Filter Checks	1. Authenticate via portal as 'uat.employee' (Software Engineer role). 2. Open the 'StandardLaptop Request' catalog card. 3. Inspect target profile cost center metrics.	Form handles variable extraction dynamically via `gs.getUser()` data arrays, locking selection categories directly to high-end developer profiles.	Profile fields auto-populated instantly. Only developer hardware arrays loaded onto the view layout.	PASS
TC-002	Synchronous CMDB Stock Level Evaluation Branching	1. Adjust target laptop item SKU inventory units to '0' inside `alm_hardware` tables. 2. Trigger request form submit actions. 3. Verify the execution pathway logs.	Flow engine triggers background inventory lookups, catches the zero-stock exception, skips internal staging tasks, and builds a supplier PO via IntegrationHub.	Flow successfully detoured execution paths, generated outbound PO request variables, and alerted supply vendors.	PASS
TC-003	Dynamic Manager Approval Notification Processing	1. Submit request ticket via baseline end-user profile. 2. Intercept communication channels routing to 'uat.manager'. 3. Click the absolute 'Approve' context button inside the MS Teams card popup.	Flow logic maps user supervisor keys cleanly, delivers actionable webhook payloads instantly, and updates flow context states on click.	Manager profile received dynamic payload data. System logged structural approvals within 1.2 seconds of transaction.	PASS
TC-004	Logistics Webhook Asset Deployment State Updates	1. Emulate an inbound delivery confirmation JSON payload from carrier REST endpoints. 2. Inspect target asset state logs.	IntegrationHub processes inbound tracking hashes, hooks into active logs, and shifts the hardware lifecycle string cleanly from 'Available' to 'In Use'.	Webhook parsed properly. CMDB record changed instantly to 'In Use' and permanently linked serial tokens to the user profile ID.	PASS

Defect Tracking & Bug Lifecycle Matrix

ID	Bug Description	Steps to Reproduce	Severity	Status	Additional Feedback
BG-001	Workflow logic locks in exception loops if manager email attributes return null values inside user profiles.	1. Delete manager fieldrecords from a target tester profile. 2. Execute a standardrequest submit action. 3. Monitor Flow Designer active logging streams.	High	Closed	Resolved by instantiating a platform validation script block that routes fallback tasks to the global IT Helpdesk if user keys lack manager properties.
BG-002	IntegrationHub shipping status tracking widgets display date variables in system formats instead of localized standard masks.	1. Trigger inboundtracking status updates from carriers. 2. Load the trackingupdates block on the portal interface view.	Medium	Closed	Corrected by running a string formatting array inside data pills to force standard layout rendering dynamically across user interfaces.

System Sign-off Authorization

Tester Name: Suresh Kumar (Senior QA Lead)	Date: 28 September 2026
Project Manager: Lakshmi Narayanan	Signature: [Digitally Signed - PKI Validated]
Product Owner: Rajesh Srinivasan	Deployment Status: APPROVED FOR PRODUCTION
